PRODUCTS

All TIMEWELL products are "field and laboratory tested"

MAXAIR

TIMEWELL now leading the way in grain aeration. Aeration of stored grain keeps moisture content low which in turn means less spoilage and more profit.

MaxAir Means Better Grain - Better Returns

Why MaxAir?

Organisms such as insects, mites, molds and bacteria are all responsible for losses in stored grain. All of these are affected by the temperature and moisture content of your grain. Keeping grain cooler and dryer controls organisms ensuring grain quality and profitability.

Cost Efficiency

MaxAir is more cost efficient than other methods of grain aeration. Easy handling and the freedom to create and conform to your existing storage facility makes MaxAir the user-friendly choice for your grain aeration needs.

MaxAir Benefits

- High density polyethylene plastic is corrosion and rust resistant
- Quicker and easier installation
- Longer-lasting, more durable than metal pipe
- Strong enough to withstand the heaviest loads

MaxAir Sock Material

- 100% Polypropylene material
- Resistant to moisture - alkalines - acids - salts and most solvents
- Designed for multi-year use
- Strong, pliable, easy to install precut 23" lengths
- Air flow - 2000 CFM at .5 SP

Large variety of smooth wall connecting accessories and fittings available on request.

Available Configurations

- | | |
|--------------------------------|--------------------------------|
